 AB We have identified a gene that has a high level of mRNA expression in
 undifferentiated, multipotential hematopoietic cells (FDCP-Mix) and that
 downregulates both transcript and protein, as these cells are induced to
 differentiate into mature myeloid cells. Sequence anal. of this gene has
 identified it as a serine protease inhibitor EB22/3 (serpin 2A).
 Constitutive expression of serpin 2A in FDCP-Mix cells was associated with an
 increase in the clonogenic potential of the cells and with a delay in the
 appearance of fully mature cells in cultures undergoing granulocyte
 macrophage differentiation when compared with control cells. Serpin 2A
 was also found to be expressed in bone marrow-derived bipotent granulocyte
 macrophage progenitor cells (GM-colony forming cell [CFC]), but not in
 erythrocyte progenitor cells from day 15 fetal liver. Expression of
 serpin 2A also showed a marked up regulation during the activation of
 cytotoxic suppressor CD8+ T cells, with a clear lag between the appearance
 of transcript and detection of protein.

'SE' IS NOT A VALID FORMAT FOR FILE 'REGISTRY'

The following are valid formats:

Substance information can be displayed by requesting individual fields or predefined formats. The predefined substance formats are: (RN = CAS Registry Number)

REG - RN

SAM - Index Name, MF, and structure - no RN

FIDE - All substance data, except sequence data

IDE - FIDE, but only 50 names

SQIDE - IDE, plus sequence data

SQIDE3 - Same as SQIDE, but 3-letter amino acid codes are used

SQD - Protein sequence data, includes RN

SQD3 - Same as SQD, but 3-letter amino acid codes are used

SQN - Protein sequence name information, includes RN

CALC - Table of calculated properties

EPROP - Table of experimental properties

PROP - EPROP and CALC

Any CA File format may be combined with any substance format to obtain CA references citing the substance. The substance formats must be cited first. The CA File predefined formats are:

ABS -- Abstract

APPS -- Application and Priority Information

BIB -- CA Accession Number, plus Bibliographic Data

CAN -- CA Accession Number

CBIB -- CA Accession Number, plus Bibliographic Data (compressed)

IND -- Index Data

IPC -- International Patent Classification

PATS -- PI, SO

STD -- BIB, IPC, and NCL

IABS -- ABS, indented, with text labels

IBIB -- BIB, indented, with text labels

ISTD -- STD format, indented

OBIB ----- AN, plus Bibliographic Data (original)

OIBIB ----- OBIB, indented with text labels

SBIB ----- BIB, no citations
SIBIB ----- IBIB, no citations

The ALL format gives FIDE BIB ABS IND RE, plus sequence data when it is available.

The MAX format is the same as ALL.

The IALL format is the same as ALL with BIB ABS and IND indented, with text labels.

For additional information, please consult the following help messages:

HELP DFIELDS -- To see a complete list of individual display fields.

HELP FORMATS -- To see detailed descriptions of the predefined formats.

ENTER DISPLAY FORMAT (IDE):end

RECORD. ALL CITATIONS AVAILABLE IN THE RE FORMAT

AB Disclosed is a human is a DNA topoisomerase I α (hTopI- α)
polypeptide and DNA (RNA) encoding such hTopI- α polypeptide. Also
provided is a procedure for producing such polypeptide by recombinant
techniques and antibodies and antagonists against such polypeptide. Also
provided are methods of using the antibodies and antagonist inhibitors to
inhibit the action of hTopI- α for therapeutic purposes such as an
antitumor agent, to detect an autoimmune disease, or retroviral
infections and to treat adenocarcinoma of the colon. Diagnostic
methods for detecting mutations in the coding sequence and alterations in
the concentration of the polypeptides in a sample derived from a host are also
disclosed.

ST DNA topoisomerase I cDNA sequence; antitumor DNA topoisomerase I;
autoimmune disease DNA topoisomerase I; retroviral infection DNA
topoisomerase I

IT Retroviridae
(detection of retroviral infections; cloning, sequence,
expression and therapeutic use of human DNA topoisomerase I α)

AB The invention provides a human S-adenosyl-5-homocysteine hydrolase (SAHH)
and polynucleotides which identify and encode SAHH. The invention also
provides expression vectors, host cells, agonists, antibodies and
antagonists. The invention also provides methods for treating disorders
associated with expression of SAHH including infection, neoplastic
disorders and disorders of the immune system.

AB Recombinant or substantially pure preps. of polypeptides and their
encoding nucleic acids are described which may be useful for diagnostic
and vaccine compns. for Helicobacter pylori infection. Thus, H.
pylori chromosomal DNA was isolated by a standard DNA protocol, nebulized,

purified, and sequenced using the multiplex DNA sequencing based on chemical degradation methods. A gene expression system, such as the pET-28b vector system, was selected for cloning and expression of recombinant protein in *Escherichia coli*. Selection of candidate protein antigens for vaccine development are derived from the nucleic acid sequences by analyzing the open reading frames (ORFs) for homol. to other known exported or membrane proteins and using discriminant anal. for predicting exported and membrane proteins. ORF amino acid sequences identified as exported or membrane-associated by the discriminant anal. algorithm are likely protein antigens for vaccine development. Thus, 546 nucleic acid sequences and their derived ORF amino acid sequences are provided. Gene knockout techniques using oligonucleotide primers for cloning, deletion, and targeting are also provided to identify nucleic acids that encode proteins essential for growth or viability, and thereby are preferred drug targets. Strain variation anal. provides nucleic acids, including probes, and peptide and polypeptide sequences that are common to all *H. pylori* strains but are not found in other bacterial species. Cloning, purifn, and characterization of the genes encoding peptidyl-prolyl cis-trans isomerase (ppi) and glutamate racemase (mirI) are described in detail as specific examples, and glutamate racemase activity can be applied in high throughput drug screening assays.

New CAS Information Use Policies, enter HELP USAGETERMS for details.

Effective September 24, 2006, Concord 3D coordinates will no longer
be available. Please contact CAS Customer Care
(<http://www.cas.org/supp.html>) if you have a need for 3D coordinates.

TSCA INFORMATION NOW CURRENT THROUGH June 30, 2006

Please note that search-term pricing does apply when
conducting SmartSELECT searches.

REGISTRY includes numerically searchable data for experimental and predicted properties as well as tags indicating availability of experimental property data in the original document. For information on property searching in REGISTRY, refer to:
